Summary: Red Tide Current Status | FWC

Source: https://myfwc.com/research/redtide/statewide/

As of the October 30, 2026, update, *Karenia brevis* (the red tide organism) was not observed in Southwest Florida. Current red tide activity is limited to Northwest Florida.

Key points

- **Southwest Florida Status:** No red tide was detected in the region over the past week.
- **Northwest Florida Status:** Bloom concentrations were observed in Bay and Gulf counties, with reports of associated fish kills and respiratory irritation in Gulf County.
- **Monitoring:** FWC updates its daily sampling map at 5 p.m. and issues formal status reports every Friday afternoon.

What you can do

- **Check current conditions:** View the daily sampling map on the FWC website for the most recent data.
- **Get updates by phone:** Call **866-300-9399** at any time to hear a recorded update on red tide conditions throughout the state.
- **Receive email alerts:** Visit the FWC subscription area to sign up for notifications when the status report is updated.
- **Report wildlife issues:** Visit the Red Tide-Related Hotlines and Information Sources page to find instructions on how to report fish kills or other wildlife effects.
- **Check forecasts:** Use the NOAA Gulf Coast Harmful Algal Bloom Forecast for information regarding potential respiratory irritation.
